Introduction

This page outlines the aims of the project.

The project involves building a collaborative web based system to enable Glasgow citizens
to interact and improve their appreciation of the beautiful city architecture and even rural scenery.

The project includes a web site and an android app. The users are able to take photos of different places in Glasgow
during different times of the day. The idea behind the project is to create an interactive system that will allow everyone
to see places in Glasgow with different realistic weather.

Please, help us by improving this innovative project by giving us opinion for each aspect of the application.

Features of the project

The questions on this page will help you to navigate through some features of the application.

*1. On the front page you should be able to see a grid-like map of Glasgow. Is that correct?

⊙ Yes

⊙ No
